

airPLAN

Trusted Advisors + Technology = Enhanced Built Environments

As we begin to reopen safely, indoor air quality is fast becoming an essential point of value that will become part of the new baseline standard of expectations from the tenant/building occupant. For building managers to draw their tenants and team members back, they will need to prove how they are proactively taking steps to increase the safety of their facility. Indoor air quality is an essential measure for property managers to track as a measure of providing an environment that is free of common air pollutants.

With the Cyclone Energy Group airPLAN service, you not only get the technology to review your air-quality on an ongoing basis, you get a team of trusted advisors to help you manage the data and make adjustments when needed to help you continually enhance your indoor environment

Trusted Advisors

When you subscribe to the airPLAN service, our dedicated engineering team partners with you to position your building(s) to safely welcome back tenants. We actively monitor, investigate, and discuss innovative solutions to improve and maintain the indoor air quality of your property.

Through data-driven analysis, we apply our engineering know-how to elevate your ability to deliver an enhanced built environment. As trusted advisors, we fuse applied engineering and technology together, allowing us to actively seek innovative ways to increase the value of your property.

Technology

Access to our technology platform makes your air quality data visible and transparent. Our team provides dashboards, kiosks, reports and real-time alerts in an actionable and easy to understand format. Air quality sensing nodes communicate in real-time on a stand-alone wireless mesh network.

Each sensor node monitors:

- Temperature
- Relative Humidity
- Carbon Dioxide (CO₂)
- Volatile Organic Compounds (VOC)
- Airborne Particulate Matter (PM 0.5, 1, 2.5, 4, 10)
- Ozone (O₃)

Better Environments

Indoor air quality is a big factor in creating healthy, sustainable environments for both residents and commercial tenants. As we reopen, creating a healthy indoor environment for your occupants to feel safe is the new standard, and many building managers' top priority.

Just as Healthy Building Certifications create a sense of confidence to building occupants, an airPLAN program of sensors and data driven insights for tenants can provide peace of mind that property managers and building owners are providing a leading essential service to enhance their indoor spaces.

Essential Package (5, 10, 25 or Custom IAQ Sensors)

The Essential Package is designed for building owners and managers to provide data visibility, operational improvements and proactive management of common building areas such as lobbies, conference centers, fitness rooms, cafeterias and tenant amenities.

You can't change what you don't know. Subscribing to monitoring and understanding how indoor air quality can improve occupant wellness is an important step in managing and maintaining a healthy environment. This package includes access to a dedicated team of engineers who will partner with you to monitor, investigate, and discuss data from the sensors.

Engineering Package (5 or Custom IAQ Sensors)

The Engineering Package is designed for building engineers and operators to provide flexibility in monitoring building HVAC equipment, evaluating filtration and ventilation effectiveness and informing on building operational adjustments.

Keeping your building running smoothly and efficiently is essential to occupant wellness. The engineering package includes flexible sensors that can be installed on select air handling equipment, providing greater insights into building performance. Our dedicated team of engineers will partner with you to monitor, investigate, and discuss data from sensors throughout the building. We'll seek innovative ways to increase the value of the building while making it more efficient at the same time.

Tenant Response Package (3, 5 or Custom IAQ Sensors)

The Tenant Response Package is designed for building owners, managers and engineers who need flexibility in monitoring tenant spaces prior to or during occupancy to know if there is a problem before one is presented to them and make the necessary adjustments to avoid tenant dissatisfaction.

In an effort to bring tenants' employees back to the office, this package offers peace of mind, knowing that the facility is being actively monitored for common air pollutants. This package builds upon the Essential and Engineering packages. We'll work with you to outfit tenant spaces with flexible sensors for greater indoor air quality monitoring.

The annual subscription service includes:

- Dedicated Engineer to support the building
- Access to Industrial Hygienists experienced in air quality testing
- Consultation on location of sensors
- Access to emerging information on Indoor Air Quality practices
- Analysis and assistance with planning, management, and operations initiatives
- Installation of sensors and mesh network equipment
- Setup of users, dashboard, reports and notifications
- Orientation and training of online dashboard
- Customization of dashboards and reports
- Technical support
- Warranty service including repairs or replacements
